

Partners in Prevention

Shining the Light on Relationship Violence

Partners in Prevention is a 501(c)(3) nonprofit charitable organization committed to helping bridge healthcare professionals and domestic abuse victim advocacy. We are dedicated to insuring that healthcare treatment for domestic violence supports victims and survivors in regaining their safety and well-being.

Our Mission

We are dedicated to preventing domestic violence and intervening when abuse is recognized. Through consulting, training and speaking, we inspire and teach nurses, physicians and therapists to recognize domestic violence, facilitate change and restore healing for the abused patients they serve.

Programs and Services

Domestic Abuse Assessment and Clinical Management Training is a series of three continuing medical and nursing educational programs designed to help healthcare providers recognize domestic abuse and clinically manage patients who are victims of violence.

The training includes the following areas of clinical education:

- Domestic violence assessment and referral
- Psychophysiology of battering dynamics and implications for healthcare
- Therapeutic communication skills that facilitate change

The recipients of these programs are physicians and nurses in family practice, internal medicine, orthopedics, emergency medicine, and obstetrics and gynecology.

The health promotion and violence prevention implications of these programs extend beyond the healthcare provider and patient to the hospital, the patient's family and to society at large.
